## Alarmed app for android

At some point during the day (or even at night), most of us need an alarm for one reason or another: waking up to work, going out for an appointment, or something else. Whatever the reason, the smartphone almost completely killed the alarm clock market right now — if you're going to wake up by your phone, then you might as well be doing it right, right? Best for most people: this stock alarm app is probably not very shocking, but when it comes to the best alarm clock, what's already on your phone is a pretty solid option for most people. Virtually every stock watch out there allows users to set multiple alarms, so you can have a different time every day if you want — or even multiple alarms a day. Most also include stopwatchers and timers, making them basically their only store to time things. It's also worth noting that if you're tired of your stock watch but want something simple, you can also install Google's Default Watch — that's what's included on Nexus and Pixel devices. Of course, these stock options are losing more advanced features, but that's precisely why we have other options on this list! Best for Advanced Features: Timely If the stock watch doesn't do it for you and leaves you wanting more of your awakening experience, there's another option — arguably better — Enter in due course. Timely is an incredibly compelling application that packs a unique (and remarkable) feature: cloud synchronization. Basically, it connects to your Google account and syncs your alarms across all devices—you can create new alarms on any device and then enable or disable them on all your devices. Even if you only have two Android devices—a phone and a tablet, for example—it's worth taking the time. But its usefulness doesn't end there. In fact, Timely has a lot to do with personalization—it's simple things, but definitely features that make it a powerful alarm clock. For example, you can set a Challenge that has to be completed before the alarm can be muted. This can be something simple like shaking your phone, or more complex tasks like solving a mathematical problem, sliding a specified pattern, or playing a small game of play. Definitely a good way to make your brain work so you can wake up. You can also set up Smart Rise, which will wake you up using sleep cycle theory. Basically, 30 minutes before the normal alarm goes off, a slowly disappearing melody will slowly start to wake you up. The idea here is to wake you naturally so you don't want to set the world on fire after being woken up abruptly. Otherwise, you can pretty much set up in a timely manner the way you want. You can change the The alarm fade-in, how long the alarm will nap (and even shorten the duration the more times you doze!), use the volume buttons to sleep the device, or set the Challenge to be needed even to nap the phone. This is good for your chronic snoozers (like me). If I had to choose an annoying thing about timely, is that you can't a random tone of the list. Personally, I get used to the same tone every day, so eventually he doesn't wake me up anymore. I need a little flavor in my alarm tones, guys. It's also worth mentioning that Google actually bought Bitspin, the developer of Timely, almost three years ago. Most people at the time expected Timely's feature to appear in Google Clock stock, but that hasn't happened yet. Although Timely hasn't seen an update in a while as a result of the purchase, it still works perfectly and looks great, making it one of the best alarm clocks out there. I hope one day Google will asse its cloud sync capabilities on your watch. These aren't the only options that are worth checking if you're looking for a new alarm clock. Gentle Alarm, though terribly outdated when it comes to design, is full of useful and interesting features. The Rock Clock — Dwayne The Rock Johnson's official alarm — is a hilarious (but really unique and amazing) alarm app worth checking out. Almost all the apps mentioned here are free except for Gentle Alarm (which offers a free trial). So you can really just try them all if you want. You have nothing to lose, really. Staying informed on the go is one of the many things for which our smartphones are amazing tools. During the day-to-day, it's easy to ignore the world around you, but the news is everywhere, including on your phone. These are the best news apps for your Android device today! In addition to giving you quick access to top daily headlines, Google News has a For You tab that provides news with the best. The app is free, and although it doesn't exactly replace Google Reader, it does a good job on everything else. Free on Google Play Inoreader is a fantastic reader and RSS service that makes it easy to build your own news feed. And you're not forced to pay for a subscription unless you want more features like notifications or an offline mode. In addition, you can use Inoreader on your phone or on your computer with the web version. Free on Google Play Flym News Reader is a unique RSS reader as it does not sync with any service like Feedly or Feedbin. Instead, you can pass and any of your fonts, and they will be saved only to the application. Then the articles will be updated and appear as soon as they reach the site you are following. Free on Google Play If you prefer to have your news delivered on the RSS form, Feedly is pretty much the default choice these days. Coming out of the ashes of Google Reader turned off, Feedly has evolved and refined its service and app, and it's a good choice everywhere. Free on Google Play Yahoo News has become a fan favorite with its curatorial sources the world's main media. In addition to live video feeds, you can customize which sources show within Yahoo News to customize your news feed. Free on Google Play For many, Flipboard is the default news app for Android. It's been around for a while. Time. was one of the first apps to make reading news less boring with its heavy, magazine-style image layout. Free on Google Play It can be difficult to keep up with the world of Android news, but with an app like Driplier, this task is a little easier. Driplier cures news, tips and tricks, and more of all your favorite Android news sources, while providing great design and even some widgets. Free on Google Play As the name implies, the SmartNews app is cleverly designed, so you can quickly read all the latest headlines from around the world. News categories appear as Channels at the top of the screen, giving you the option to swipe through them one by one or tap a specific channel. Free on Google Play With all the different video streaming platforms, it can be hard to keep track of what's coming and when it'll be out. With an app like Must, these concerns are resting posts as this works as a social media network for movies and TV shows. Free on Google Play When the news breaks, chances are it broke via Twitter somehow. With 240 characters, Twitter has become the place to learn about everything that's happening in the world, and with live updates, you'll never miss a beat. Free on Google Play Pocket has become a favorite among news readers for the ability to save articles to read later quickly. In addition, there is a section of curating the best of the web, which will provide you with exclusive news articles that you may not have heard or seen otherwise. Free on Google Play It can be difficult to find an app that not only allows you to read sources from various media around the world. But Haystack TV does this and pushes the envelope giving users access to more than 300 channels to watch news from their area or anywhere in the world. Free ads on Google Play Source: Andrew Myrick/Android Central The list of good news apps can continue for days as there are many different ways to consume news nowadays. This is a good problem to have as you can find the best news app to consume information in a way you like. Google News has been around for a long time. So Google decided to give it a much needed and much deserved facelift, and it became the de facto news app for many. This is largely, in part, for the curation provided and the customization options that are built appropriately in On the other hand, Inoreader, is for the more power users who are looking for more of your news app. You can customize your news feed to show you exactly what you want, and there are many integrations to save content for more with the help of Evernote, Dropbox, and more. Smartwatches may be getting more popular, especially with new features delivered by the likes of Apple Watch Series 5 and Samsung Galaxy Watch Active 2. But for most of us, the smartphone remains our time keeper and alarm clock of choice. The latest and best watch apps are loaded with extra extra features such as highly configurable alarms, sleep records and assorted plugins. Make sure you never wake up late with the best watch apps for Android and iOS. (Image credit: Monkey Business Images/Shutterstock) Prev Page 1 of 16 Next Prev Page 1 of 16 Next Timely is easily among the best designed and functional alarm clocks in the Google Play store, with experience of three panels for setting alarms, a main clock screen and a timer and timer mode. The alarm panel allows you to quickly set alarms by sliding and tapping the side of the screen, with support for multiple simultaneous alarms. Each alarm can be further customized with different labels and songs. You can even add a challenge (such as a math problem or a corresponding mini-game). Prev Page 2 of 16 Next Prev Page 2 of 16 Next Alarmy (Android, iOS) is called the most annoying alarm in the world. When users turn off an alarm, they also set a location that they need to take a picture of, otherwise the alarm just doesn't turn off. A popular idea is to set your bathroom sink as your target location, forcing you to get out of bed and go to the sink so you can start in the day. Other options include the ability to use your music as your alarm tone and a shake mode on iOS to turn on the alarm with a series of shakes. Prev Page 3 of 16 Next Prev Page 3 of 16 Next AMDroid combines a pure and flat material aesthetic with a number of useful alarm settings to make a great alarm clock app for oversleepers. Users can set multiple alarms, each with its own independent settings, from a shot to recurring alarms and countdown timers. You can add a smooth alarm and pre-wake to wake you up slowly as well as wake up challenges to make sure you're really conscious. Users can set alarms to respect holidays, add geocences, and even include a bedtime notification to remind you to get enough sleep for a particular alarm or event. Prev Page 4 of 16 Next Prev Page 4 of 16 Next If you want to start your mornings with a daily dose of fluff, check out AlarmMon (Android, iOS), a watch app that fully embraces the cute aesthetics of stickers and cartoon characters to help wake you up. Users can set a variety of alarm types, from noisy or quite alarming alarms, to more involved alarms, such as those incorporating characters and games to make sure you're awake. In addition to free and premium alarms, AlarmMon can also display time and news at the end of your alarm. A cute feature is that AlarmMon can record your alarm behavior by recording how long it took you to turn off the alarm at certain times and days. Prev Page 5 of 16 Next Prev Page 5 of Next FreakyAlarm wants to make sure you are awake and active, mentally and physically, instead of resting on hitting the snooze button on the bed. For this, the iOS app comes with a variety of minigames and annoying sounds to add to the alarm clock mix or your awakening music, ensuring you're at least awake enough to solve basic logic problems before closing close the nap. A randomizer option prevents alarms and wake-up games from being too repetitive, and you can also set the app to require you to scan barcodes or photo objects before turning off. Prev Page 6 of 16 Next Prev Page 6 from 16 Next Early Bird Alarm Clock is a pure multipurpose alarm clock on Android that offers a useful mix of alarm features to help you get up every morning. Users can create multiple recurring alarms (with the option to cycle through a series of alarm sounds) and different methods of turning off the alarm, such as math problems, QR codes or voice recognition. The app also displays the weather and your upcoming calendar events as soon as you turn off the alarm, giving you an advantage for your work day. An in-app purchase removes ads and gives you a clock widget to add to your home screen. Prev Page 7 of 16 Next Prev Page 7 of 16 Next Looking for a more scientific approach to wake up after a good night's rest? Try Sleep Cycle (Android, iOS), a sleep analysis and a smart alarm clock that uses your device's sensors, along with sleep science, to try to find the right time to wake you up. Just put your smartphone by your side when you sleep, and sleep cycle will track the quality of your sleep based on your movements in bed. Set a target time to be ready, and sleep cycle will try to wake you up in your lighter sleep near the target time for optimal wakefulness. The app also comes with sleep logging tools and analytics, with more features unlocked with a paid subscription. Prev Page 8 of 16 Next Prev Page 8 of 16 Next Another solid science-based sleep tracking app and smart alarm is Sleep As Android, which combines with your phone sensors or other wearables to track the quality of your sleep and find the best time to wake up from light sleep. The app comes with a variety of app integrations and add-ons, allowing you to control supported smart bulbs, or incorporate captchas or Spotify music into your wake-up alarms. Sleep As Android comes with a 2-week free trial before paying \$6 for the full version. Prev Page 9 of 16 Next Prev Page 9 of 16 Next Providing more than just an alarm clock app, Chronus is a multipurpose array of home and lockscreen widgets that provide users with multifunctional widgets for their Android phone. Users can configure lock and home screen widgets to display the clock, future alarms, calendar events, tasks, and more. The app already comes loaded with a wealth of free tier options, and a premium upgrade unlocks more features such as unlimited dashclock extensions, inventory alerts and support for exchange, Evernote and Todoist tasks. Prev Page 10 of 16 Prev Page 10 of 16 Next Snap Me Up takes a different grip from other alarm clock apps, jumping awakening puzzles or math problems. Instead, once the alarm goes off, Snap Me Up also fires the camera from your phone, and the only way to kill the alarm is to take a selfie or video of yourself, capturing your groggy awakenings. The app also includes a dream dream and a timer, in addition to the features of the alarm clock. Prev Page 11 of 16 Next Prev Page 11 of 16 Next Gentle Alarm may have a dated Android interface, but don't let that stop you from giving this feature-rich alarm clock a chance. Gentle Alarm comes with a bucket full of features and settings, from the basics such as multiple alarms, recurring alarms and puzzle modes, to a variety of preset alarm profiles, configurable taps, smart alarms and even the ability to set the alarm for Internet radio stations. All these characteristics of power are the blessing and banishing of the Gentle Alarm. If you're looking for a simple alarm clock app, look elsewhere. But if you're especially particular about alarm settings and don't mind spending time messing with settings, Gentle Alarm is a pretty configurable app. Prev Page 12 of 16 Next Prev Page 12 of 16 Next Walk Me Up (Android, iOS) works on the idea that the best alarm clock is the one that really takes you up and moves. To turn off the alarm noises of the Walk Me Up, you have to pick up your phone and walk 15 steps, forcing you to get up and really move. You can't cheat just by swaying the phone, too, as this restarts the step counter. An evil mode also turns off the snooze button. In-app purchases remove ads, let you limit maximum naps, and add a gradual alarm mode for a less aggressive wake-up call. Prev Page 13 of 16 Next Prev Page 13 of 16 Next Prolific App Developer Apalon has also thrown his hat in the ring for alarm clocks designed with sleep science in mind with Good Morning Alarm Clock (Android, iOS). Users set an alert time and then set the phone in bed. The app uses the phone's sensors to record sleep movements to detect phases of light and deep sleep. GMAC then takes a look at the target alarm window and wakes it up at a point of light in your sleep cycle to avoid feelings of lethargy. GMAC can record the amount and quality of your sleep, and also has a bedside mode if you don't use the app's sleep tracking functions. Prev Page 14 of 16 Next Prev Page 14 of 16 Next AVG is not a name you would normally appreciate with timing, but stalwart antivirus also makes a variety of smartphone utilities that include Alarm Clock Xtreme, a multipurpose Android clock, stopwatch and timer app. Alarms can be set to one-offs or recurring on specific days, and can wake you up through your phone ring, music, or even the option to activate a specific app like your alarm (such as your music app or news reader). If you have a habit of abusing the snooze button, you can set the snooze times to drop to each press, or ways to discard the alarm beyond a button on the screen, such as shaking the device, solving mathematical problems, or getting into a captcha. A new My Day Dashboard feature can display your upcoming events, weather forecast, and news articles in front and center as soon as you drop the alarm. Prev Page 15 of 16 Next Prev Page 15 of 16 Next Pillow takes a similar approach with sleep tracking, sleep, your iPhone or Apple Watch sensors to track your sleep duration and quality. It then offers breakdowns regarding different stages of sleep, such as REM and deep sleep, along with heart rate logging and sleep quality assessment in combination with Apple Health's built-in app. A smart alarm feature allows the app to gently facilitate wakefulness at the best time based on your sleep activity and the time you set. The app comes with a wealth of tracking features, and a \$4-99 in-app purchase unlocks more, such as the option to export your sleep sound recordings, detailed tracking of sleep statistics over time, and a nap mode with a smart alarm designed for shorter sleep bursts.
